Creating n8n workflow:

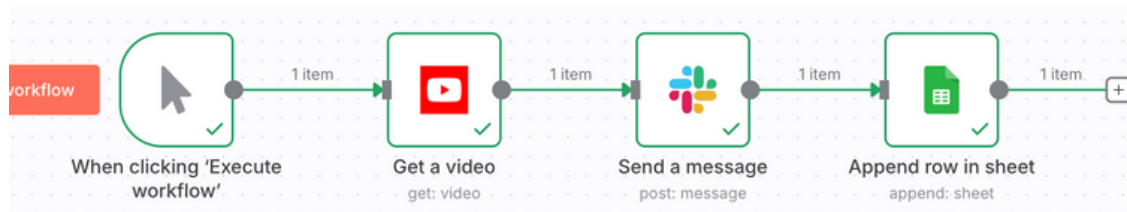

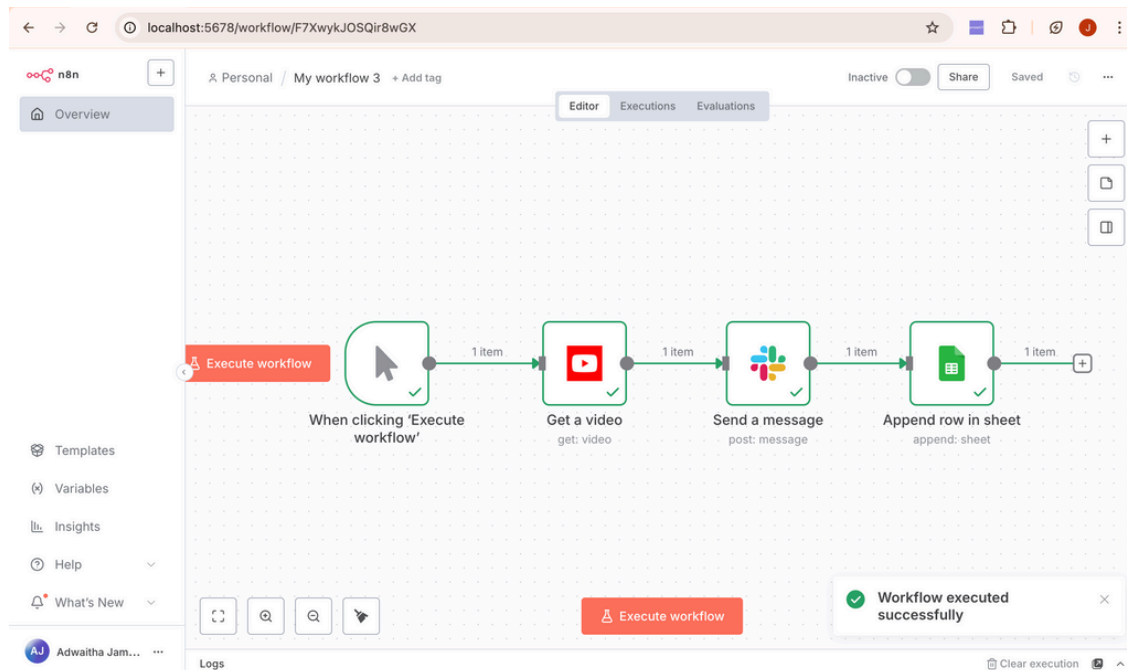

My workflow connects YouTube, Slack, and Google Sheets to automatically fetch video details, send notifications, and store the information for tracking."

The workflow uses three main tools or integrations:

YouTube – as the data source, to fetch video details.

Slack – as the communication tool, to send instant alerts.

Google Sheets – as the database, to store and log video details for future analysis.

Slack provides instant communication — great for team awareness, while Google Sheets ensures structured data storage — useful for long-term tracking and analysis.
